

INDOOR TURF FLOORING

The IT740 is a non-rubber infilled turf that performs exceptionally well in high in wear and resistance tests. The blend of nylon and polyethylene practically a 50/50 combination, giving you a true ball roll of a traditional nylon field, with the softness of rubber-filled turf. This no rubber infill turf makes it easy to maintenance and up to 10% cooler than traditional alternatives.

This indoor turf is one of the top-performing surfaces in creating spaces for multiple uses, pulling or pushing sleds, conditioning drills, and plyometric exercises – you can get a full-body workout.
